M300 (Mission 300)

Supporting Nigeria's commitment to expand energy access, mobilise private investment, and integrate renewables as part of Africa's goal of connecting 300 million people by 2030.

Top KPI's

5,450,000	6.8%	27%
New Connections	Annual Access Growth	Renewable Share

On Track

View Programme Details | Add A Note

Distributed Access Through Renewable Energy Scale-Up..

A flagship initiative to rapidly expand electricity access through private-sector—led mini-grids, standalone solar systems, and interconnected renewable solutions, building on the achievements of the Nigeria Electrification Project.

Top KPI's

16.2M	1.3 million people	US$1.1 billior
Projected New Connections	Improved Access	Expected Priva

Presidential Metering Initiative (PMI)

Accelerating nationwide smart metering to close the metering gap, improve billing accuracy, and reduce ATC&C losses across Nigeria's electricity distribution network.

Metadata

Programme Lead	Status	Reporting Frequency
Federal Ministry of Power	**On Track**	**Monthly**

Overall Progress
64%
Based on metering targets, rollout milestones, and reporting compliance.

Meters Deployed
2,350,000
Smart meters installed across all DisCos to date.

Metering Gap Closed
47%
Customers transitioned from estimated billing to metered billing.

Programme Summary

The Presidential Metering Initiative (PMI) is a national programme designed to rapidly close Nigeria's metering gap and eliminate estimated billing through the deployment of smart prepaid meters. The programme strengthens the financial viability of the electricity sector by improving billing accuracy, boosting revenue assurance, and enabling data-driven grid operations. PMI also supports job creation through certified meter installation, enhances customer trust, and accelerates the shift towards modern smart grid infrastructure.

Key Objectives:

- Deploy over X million smart meters by 2027
- Eliminate estimated billing nationwide
- Improve billing transparency and fairness for consumers
- Support DisCos with loss reduction and revenue recovery
- Enable smart grid readiness and real-time energy data
- Create jobs through local certified meter installers

Trends & Insights

A high-level view of PMI's performance over the past reporting periods.

Meter Deployment Trend

↑ **+28%**
in 6 months

Smart meter deployment has accelerated across all DisCos, driven by improved logistics coordination and local assembly capacity.

Customer Impact

1.7M
customers moved to actual billing

Fewer customers are experiencing estimated billing, improving transparency and customer trust.

Timeline & Milestones

Key phases of the PMI implementation.

Phase 1 — Planning & Policy Development
Completed
Development of metering frameworks, regulatory approvals, and technical standards.

Phase 2 — Procurement & Local Assembly
Completed
Onboarding of local meter assemblers and rollout of quality assurance processes.

Phase 3 — Nationwide Deployment
In Progress
Active metering installation across all DisCos, prioritising high-loss feeders and underserved communities.

Phase 4 — Monitoring, Analytics & Optimisation
Upcoming
Real-time data integration, smart grid analytics, and long-term sustainability adjustments.

Programme Documents & Resources

Programme design documents, regulatory guidelines, and approved implementation frameworks that define structure, scope, and governance.

Distribution Sector Recovery Programme (DISREP)

Strengthening Nigeria's electricity distribution companies through metering, infrastructure upgrades, improved billing accuracy, and targeted loss reduction initiatives.

Metadata

Programme Lead	Status	Reporting Frequency
Bureau of Public Enterprises (BPE) & Federal Ministry of Power	On Track	Monthly

Overall Progress

58%

Based on approved milestones and implementation progress across all DisCos.

Smart Meters Installed

1,050,000

Devices deployed under the DISREP metering component.

Billing Accuracy

88%

Customers billed using actual consumption vs estimated billing

Programme Summary

The Distribution Sector Recovery Programme (DISREP) is a Federal Government initiative, supported by a $500 million World Bank loan facility, aimed at improving the technical, financial, and operational performance of Nigeria's electricity distribution companies.

DISREP focuses on reducing losses, enhancing revenue assurance, improving customer billing accuracy, and strengthening critical distribution infrastructure. The programme supports the rollout of smart meters, deployment of transformer metering, network rehabilitation, and implementation of DisCo Performance Improvement Plans (PIPs).

Through its interventions, DISREP advances transparency, utility sustainability, and better service delivery to electricity consumers nationwide.

Key Objectives:

- Deploy over 3.2 million smart meters across all DisCos
- Modernise distribution infrastructure and reduce downtime
- Improve billing accuracy and eliminate estimated billing
- Reduce ATC&C losses across DisCos
- Support implementation of Performance Improvement Plans (PIPs)
- Strengthen financial viability and service delivery in NESI
- Enhance customer protection and transparency

View Full Metrics Dashboard

Trends & Insights

A snapshot of DISREP's performance movement over time.

Meter Deployment Growth

↑ +19%
in 6 months

Meter deployment continues to rise across major urban clusters, driven by improved procurement and logistics coordination.

Loss Reduction Improvement

↑ 36% → 29%
36% → 29%

Enhanced billing accuracy and targeted technical upgrades have contributed to a significant decline in losses.

Customer Service Uplift

700k
customers removed from estimated billing

DISREP interventions have increased transparency and reduced customer complaints linked to estimated billing.

Timeline & Milestones

Key phases of the PMI implementation.

Phase 1 — Programme Design & Approvals
Completed
Finalisation of DISREP framework, World Bank approval, and establishment of governance structures.

Phase 2 — Procurement & Meter Supply Chain
Completed
Selection and onboarding of local and international meter vendors; establishment of logistics channels.

Phase 3 — Deployment & Infrastructure Rehabilitation
In Progress
Large-scale smart meter rollout, DT metering, feeder rehabilitation, and billing system enhancements.

Phase 4 — Monitoring, Verification & Sustainability
Upcoming
Third-party verification, performance auditing, and long-term sustainability support for DisCos.

Mission 300 — Nigeria

Driving Nigeria's commitment to massively accelerate electricity access, scale distributed renewable energy, expand clean cooking adoption, and support Africa's mission to connect 300 million people by 2030.

Metadata

Programme Lead	Status	Reporting Frequency
Federal Ministry of Power & Rural Electrification Agency	**On Track**	**Quarterly**

Access to Electricity Growth

+9%

Increased from current 5% annual pace to achieve universal access by 2030.

Clean Cooking Access Growth

+25%

Aiming to provide clean cooking access to 227 million people by 2030.

Renewable Energy Share

22% → 50%
by 2030

Target share of renewables in national generation mix (including hydro).

Programme Summary

Mission 300 places Nigeria at the center of Africa's goal to connect 300 million people to electricity by 2030. As the largest population and energy-deficit nation on the continent, Nigeria's leadership is essential.

The National Energy Compact outlines a bold roadmap to close access gaps, strengthen energy institutions, scale distributed renewable energy (DRE), expand clean cooking solutions, and mobilise large-scale public and private investment. The Compact sets a clear direction toward universal access, a cleaner energy mix, and financially sustainable utilities all of which form the Nigerian contribution to M300.

Key Objectives:

- Nigeria's Key Commitments Under M300:
  - Increase electricity access growth from 5% to 9% annually
  - Achieve universal electricity access by 2030 (from 61% in 2022)
  - Increase access to clean cooking from 22% to 25% annually
  - Expand renewable energy share from 22% to 50% of generation
  - Mobilize US$23.2B in total financing, including US$15.5B private
  - Deploy mini-grids, standalone solar solutions, and grid expansion
  - Implement a national electrification strategy aligned with least-cost planning
- All commitments referenced from the Declaration of Commitment and Compact Targets.

View Full Metrics Dashboard

Trends & Insights

Narrative highlights based on the Compact's modelling and progress.

Electrification Momentum

+9% Target vs 5% Current Pace

Nigeria aims to nearly double its annual electrification pace by scaling a mix of grid expansion, mini-grids, and standalone solar systems.

Off-Grid Scale-Up

16.2M
36% → 29%

The DARES project under M300 is projected to deliver over 16.2 million new off-grid connections and 1.3 million interconnected mini-grid beneficiaries.

Clean Cooking Transition

25%/year
Access to clean cooking rising

Nigeria targets universal clean cooking access by 2030 — a major shift from today's heavy reliance on biomass and LPG-only gains.

Timeline & Milestones

Key phases of the PMI implementation.

Phase 1 — Policy, Planning & Institutional Setup
In Progress
Establishment of the National Integrated Electricity Policy, least-cost planning, and National Electrification Strategy (NESIP).

Phase 2 — Grid Expansion & Utility Reforms
In Progress
Transmission upgrades, bilateral contracting reforms, PIP execution, financial viability measures, and tariff reforms supported by PSRP.

Phase 3 — Distributed Renewable Energy (DRE) Scale-Up
In Progress
Deployment of mini-grids, standalone systems, and private sector—driven projects under DARES, NEP, and other frameworks.

Phase 4 — Clean Cooking Acceleration
In Progress
Third-party verification, performance auditing, and long-term
